It is noted that the status of the parent application recited on instant pg. 1 needs to be updated.

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, "zinc oxide/hydroxide" is indefinite as to what this is or refers to. It appears that – zinc oxide and/or zinc hydroxide – was intended.

In claim 2, "other oxychlorides" renders the claim indefinite as to how zinc oxide could be produced by the process if the "other oxychlorides" were anything other than zinc oxychlorides. It appears that – other zinc oxychlorides – was intended.

In claim 3, "Simonkolleite/zinc oxychloride" is indefinite as to what this is or is to mean.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 1754

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148

USPQ 459 (1966), that are applied for establishing a background for determining

obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Wannschaff '420.

Wannschaff suggests the instantly claimed process of providing zinc oxychloride, adding water and then adding base, eg. lime or alkali, to form pure zinc oxide which would appear to have the instantly claimed product purity since the taught process is

the same as that instantly claimed for making zinc oxide. See pg. 2, left column and the claims.

Claims 1,3 appear allowable over the cited prior art of record none of which teaches or suggests the instantly claimed combination of process steps.
